

THE KINGDOM FORGE CONSTITUTION

The Economic Constitution and Feature-Ownership Whitepaper of AoE2WAR

Version 1.1 — The Ten-Thousand-Deed Constitution

PREAMBLE

AoE2WAR is not merely a website, statistics service, betting platform, or blockchain application.

It is a persistent competitive kingdom built around Age of Empires II—where games become history, players become known, rivalries acquire consequence, and the people who contribute capital and labour can participate in the value they help create.

WOLO is the native money of this kingdom.

WoloChain is its settlement ledger.

The Kingdom Forge is the system through which citizens decide what AoE2WAR should become, supply the resources required to build it, perform the work, receive ownership in completed features, and participate in the revenue those features generate.

The Forge is governed by one foundational principle:

The first million earns. The rest builds.

Its complete economic journey is:

Hold → Stake → Choose → Fuel → Build → Own → Earn → Trade → Leave a legacy.

This Constitution defines that journey.

It exists to ensure that:

- wealth alone cannot consume the entire staking economy;
- excess capital can be directed toward productive development;
- builders receive permanent recognition and economic participation;
- the Kingdom remains financially healthy;
- ownership is measurable, auditable, and resistant to arbitrary dilution;
- contributors know the rules before committing capital or labour;

- no feature can escape its obligations by being renamed or replaced;
- failure is handled openly rather than erased;
- every WOLO, point, payment, deed, vote, and distribution has permanent provenance.

The Kingdom Forge shall be deep, but not obscure.

Its complexity must always arise from real economic questions—not from unnecessary currencies, hidden formulas, or decorative mechanics.

ARTICLE I — PURPOSE

1.1 The Purpose of the Kingdom Forge

The Kingdom Forge exists to transform excess staked WOLO into:

1. public support for proposed AoE2WAR features;
2. spendable development resources;
3. measurable financing and labour contributions;
4. permanent ownership in completed features;
5. transparent participation in feature revenue;
6. historical status and legacy within AoE2WAR.

1.2 What the Forge Is Not

The Kingdom Forge is not:

- an unlimited passive-yield system;
- a mechanism for whales to extract all ecosystem rewards;
- a hidden treasury controlled through discretionary accounting;
- a promise that every project will succeed;
- a guarantee that Feature Deeds will have market value;
- permission to represent legally restricted financial rights without proper legal structure;
- a substitute for product quality, users, or genuine feature revenue.

1.3 The Product Principle

AoE2WAR shall not exist to advertise WOLO.

WOLO shall exist to make AoE2WAR deeper, more consequential, more participatory, and more alive.

ARTICLE II — THE FOUNDATIONAL LAWS

The following laws govern the Kingdom Forge:

1. **One WOLO is always one WOLO.**
2. **The full amount a user stakes shall remain visible.**
3. **Only the first 1,000,000 staked WOLO per eligible identity receives ordinary Crown staking rewards.**
4. **Staked WOLO above the Crown Stake becomes Forge Power.**
5. **Forge Power represents productive capacity and influence, not spendable money.**
6. **Pledging Forge Power is reversible and creates no ownership.**
7. **Igniting Build Fuel places real WOLO at risk.**
8. **Only Build Fuel ultimately consumed by a project earns permanent Finance Points.**
9. **Only accepted work earns Builder Points.**
10. **Every successfully sealed feature creates exactly 10,000 Feature Deeds.**
11. **Every feature's deeds are divided 70% to financiers, 20% to builders, and 10% to the Kingdom.**
12. **Feature Deeds shall not be diluted after issuance.**
13. **One Feature Deed equals 0.01% ownership of the defined feature economy.**
14. **One hundred Feature Deeds equal 1% ownership of a feature.**
15. **All distributable feature revenue follows the Feature Deeds.**
16. **Economic ownership does not automatically grant operational control.**
17. **No successor, renamed, migrated, or replacement feature may escape the obligations of the original feature.**
18. **No contributor receives permanent credit for refunded capital or rejected work.**
19. **Every project must publish a binding Project Charter before accepting Build Fuel.**
20. **Every material action must be recorded in the Forge Chronicle.**
21. **Transferable revenue-bearing rights shall not activate until the required legal structure is established.**

ARTICLE III — THE ECONOMIC OBJECTS

Only two objects within the Forge are intended to function as transferable economic assets:

1. WOLO;
2. Feature Deeds.

All other terms describe states, measurements, rights, accounting systems, or project resources.

3.1 WOLO

WOLO is the native money of AoE2WAR and WoloChain.

WOLO may be:

- held;
- transferred;
- staked;
- wagered;
- earned;
- paid;
- allocated;
- released into project escrow;
- spent by an authorized project;
- distributed as feature revenue.

WOLO does not change identity when its state changes.

“Staked WOLO,” “Forge Power,” and “Build Fuel” do not represent separate tokens.

They describe what particular WOLO is currently doing.

3.2 Staked WOLO

Staked WOLO is the total amount of WOLO bonded by a user through the AoE2WAR staking system.

The user’s full bonded amount shall remain prominently visible.

A user with 5,000,000 WOLO staked shall be displayed as holding:

5,000,000 WOLO Staked

The system shall not misleadingly display only the reward-bearing portion.

3.3 Crown Stake

Crown Stake is the portion of a user’s staked WOLO eligible to receive ordinary staking distributions.

The initial Crown Stake cap is:

1,000,000 WOLO per eligible AoE2WAR staking identity

The Crown Stake is calculated as:

$$\text{Crown Stake}_i = \min(\text{Total Eligible Stake}_i, 1,000,000)$$

The Crown Stake cap limits reward weight.

It does not limit:

- total ownership;
- total staking;
- public rank;
- validator delegation;
- Forge participation;
- prestige within the Kingdom.

3.4 Forge Power

Forge Power is staked WOLO above the Crown Stake cap.

$$\text{Forge Power}_i = \max(\text{Total Eligible Stake}_i - 1,000,000, 0)$$

Forge Power represents the user's capacity to support proposed development projects.

Forge Power:

- remains staked;
- remains owned by the user;
- does not automatically earn ordinary Crown staking rewards;
- may be pledged among Forge projects;
- may be reallocated while no binding Fuel commitment exists;
- does not itself create Feature Deeds;
- does not itself fund development.

Forge Power chooses. Build Fuel builds.

3.5 Pledged Forge Power

Pledged Forge Power is Forge Power assigned to a proposed or authorized project.

Pledging Forge Power:

- increases that project's Mandate meter;
- publicly signals support;
- may help authorize the project;
- is reversible before Fuel ignition;
- creates no Finance Points;
- creates no ownership;
- does not remove WOLO from the user's stake.

A pledge expresses:

"I believe this should be built."

It does not yet express:

"Spend my capital to build it."

3.6 Build Fuel

Build Fuel is real WOLO released from a user's stake into a project-specific escrow under the terms of a binding Project Charter.

When Forge Power is converted into Build Fuel:

- the corresponding WOLO leaves the user's stake;
- it ceases to be Crown Stake or Forge Power;
- it ceases to belong freely to the financier;
- it becomes restricted project capital;
- it may be released only under the project's milestones and expenditure rules;
- it may be returned if it remains unspent and the Charter permits a refund;
- once properly spent, it is permanently consumed.

The act of converting Forge Power into Build Fuel shall be called:

Ignition

The interface may present a clear action such as:

IGNITE 500,000 WOLO

Ignition must always show:

- the amount leaving stake;
 - the project receiving it;
 - whether it is refundable;
 - the Finance Point rules;
 - the project's current risks;
 - the Charter governing its use.
-

3.7 Finance Points

Finance Points are non-transferable accounting units measuring a financier's capital at risk and the eligible duration of that risk.

Finance Points determine how the 7,000 Patron Feature Deeds are divided.

Finance Points:

- are not WOLO;
 - are not transferable;
 - cannot be traded;
 - do not independently generate revenue;
 - exist only within a specific Forge project;
 - cease to accrue at the Forge Seal;
 - are based only on Build Fuel ultimately consumed by the project.
-

3.8 Builder Points

Builder Points are non-transferable accounting units awarded for accepted work performed on a Forge project.

Builder Points determine how the 2,000 Builder Feature Deeds are divided.

Builder Points:

- are project-specific;
 - may be earned through code, design, testing, operations, infrastructure, documentation, moderation, promotion, or other accepted work;
 - are not awarded merely for time claimed;
 - vest through published milestones;
 - may be partially withheld or clawed back when work fails defined acceptance or warranty standards.
-

3.9 Kingdom Points

There shall be no general Kingdom Point currency in the founding system.

The Kingdom's 10% ownership is constitutional and automatic.

Contributions made by citizens on behalf of the Kingdom shall earn Builder Points when they constitute real accepted work.

No extra accounting unit shall be created unless it performs a necessary function that cannot be handled by WOLO, Finance Points, Builder Points, or Feature Deeds.

3.10 Feature Deeds

Feature Deeds are fixed ownership units created when a Forge project is successfully sealed.

Every feature creates exactly:

10,000 Feature Deeds

Each deed represents:

0.01% of the defined feature economy

The percentage ladder is:

Feature Deeds	Ownership
1	0.01%
10	0.1%
100	1%
1,000	10%
10,000	100%

The fundamental user shortcut is:

100 Feature Deeds equal 1% ownership.

Feature Deeds may carry:

- economic rights;
- defined feature-governance rights;
- provenance;
- transfer rights once legally enabled;
- succession and inheritance rights;
- rights in a qualifying sale or retirement event.

Feature Deeds do not automatically grant ownership of:

- AoE2WAR trademarks;
 - WoloChain;
 - shared source code;
 - shared infrastructure;
 - servers;
 - copyrights outside the feature's defined economic rights;
 - ordinary operational command.
-

ARTICLE IV — THE STAKING SYSTEM

4.1 Full Stake Visibility

The staking interface shall display the user's full stake, followed by its economic composition.

Example:

Jim — 5,000,000 WOLO Staked
Crown Stake: 1,000,000
Forge Power: 4,000,000
Allocated Forge Power: 3,500,000
Unassigned Forge Power: 500,000

A segmented bar may visually distinguish:

- Crown Stake;
- allocated Forge Power;
- unassigned Forge Power.

No asterisk shall be used as a substitute for clear disclosure.

4.2 Crown Reward Formula

Ordinary staking distributions shall use capped reward weight:

$$\text{Reward Weight}_i = \min(\text{Eligible Stake}_i, 1,000,000)$$
$$\text{Staking Reward}_i = \text{Total Staking Distribution Pool} \times \frac{\text{Reward Weight}_i}{\sum_j \text{Reward Weight}_j}$$

A user staking 5,000,000 WOLO receives ordinary staking rewards as though 1,000,000 WOLO were reward-bearing.

The remaining 4,000,000 WOLO remains valuable as Forge Power.

4.3 Identity Aggregation

The Crown Stake cap applies per eligible staking identity, not per wallet.

Connected wallets belonging to the same recognized AoE2WAR staking identity shall be aggregated when reasonably detectable.

This rule exists to prevent a user from avoiding the cap by splitting stake across multiple addresses.

The system shall disclose:

- which wallets are linked;
- which balances are aggregated;
- how reward eligibility is calculated;
- what appeal process exists for incorrect linkage.

No identity system can eliminate every form of Sybil behaviour.

The objective is to prevent obvious and economically material circumvention.

4.4 Reward Cap Changes

The initial Crown Stake cap is 1,000,000 WOLO.

Any future change must:

- be publicly proposed;
 - include an economic analysis;
 - apply prospectively;
 - provide advance notice;
 - never retroactively reduce previously earned rewards;
 - never alter already issued Feature Deeds.
-

ARTICLE V — THE FORGE PAGE

5.1 Purpose of the Page

The Kingdom Forge page shall show the Kingdom's active development economy.

It shall allow users to:

- examine proposed features;
 - compare their support and progress;
 - pledge Forge Power;
 - ignite Build Fuel;
 - inspect Project Charters;
 - track ownership projections;
 - observe public activity;
 - view sealed projects and completed features.
-

5.2 User Forge Summary

The top of the page should display:

- total staked WOLO;
 - Crown Stake;
 - total Forge Power;
 - pledged Forge Power;
 - unassigned Forge Power;
 - Build Fuel committed;
 - active Forge projects;
 - existing Feature Deeds;
 - estimated or historical feature distributions.
-

5.3 Allocation Controls

A user may assign Forge Power using:

- a direct WOLO amount;
- or a percentage of available Forge Power.

The presentation preference shall never alter the accounting result.

The interface may support different visual modes, but every mode must show the same underlying numbers.

5.4 Project Health Meters

Every project tile shall display three separate health meters.

Mandate

Measures pledged Forge Power.

It answers:

“Does the Kingdom want this?”

Fuel

Measures Build Fuel committed or consumed against the project’s published requirement.

It answers:

“Can the Kingdom afford to build this?”

Construction

Measures accepted work and milestone completion.

It answers:

“Is the feature actually being built?”

These meters shall never be merged into one misleading percentage.

5.5 Public Activity

Material Forge activity shall be publicly recorded.

Examples:

Jim pledged 2,000,000 Forge Power to Battle Cam.

Emaren ignited 500,000 WOLO as Build Fuel.

Academy Intelligence reached its Authorization threshold.

The Tournament Engine completed Milestone III.

Battle Cam entered Seal Review.

The public presentation may use Kingdom lore.

The underlying accounting must remain literal and inspectable.

ARTICLE VI — PROJECT LIFECYCLE

A Forge project shall move through defined states.

6.1 Idea

A concept exists but has no formal economic standing.

6.2 Proposed

A preliminary feature page exists.

Users may inspect the concept and pledge Forge Power.

No Build Fuel may be accepted.

6.3 Gathering Power

The project accumulates public Forge Power support.

The Mandate meter is active.

6.4 Authorized

The project reaches its published Mandate threshold and passes internal feasibility review.

A complete Project Charter must be published before the project may accept Build Fuel.

6.5 Fueling

Users may ignite Build Fuel into the project escrow.

Finance Point accrual begins according to the Charter.

6.6 Under Construction

Milestones are active.

Build Fuel may be released for accepted work and authorized expenses.

Builder Points begin vesting.

6.7 Seal Ready

The project claims that:

- the minimum viable feature is complete;
- accounts are reconcilable;
- accepted Builder Points are known;
- consumed Build Fuel is known;
- Finance Points can be finalized;
- ownership can be calculated.

6.8 Forge Sealed

The ownership record becomes final.

At the Seal:

- Finance Point accrual stops;
- Builder Points are finalized subject to remaining warranty vesting;
- 10,000 Feature Deeds are created;
- no new founding ownership may be earned;
- the cap table becomes permanent.

6.9 Launched

The feature becomes available in production.

Launch may occur before or after revenue activation.

6.10 Revenue-Bearing

The feature begins generating attributable revenue.

Distributable revenue flows according to the Feature Deeds.

6.11 Dormant

The feature remains intact but is inactive, paused, or temporarily non-revenue-producing.

6.12 Retired

The feature has been formally discontinued according to its Charter and governance rules.

6.13 Fallen

The project failed before successful Seal.

Its history remains visible.

No failed Forge shall be silently deleted.

ARTICLE VII — THE PROJECT CHARTER

7.1 Required Charter

No project may accept Build Fuel without a published Project Charter.

The Charter is the project's binding economic constitution.

7.2 Required Charter Contents

Every Charter must define:

1. feature name and purpose;
2. promised scope;
3. minimum viable deliverable;
4. exclusions from scope;
5. Forge Power authorization threshold;
6. required Build Fuel;
7. maximum accepted Build Fuel, if applicable;
8. project milestones;
9. milestone budgets;
10. Builder Point schedule;
11. acceptance authority for each milestone;
12. Finance Point formula;
13. maximum Eligible Risk Days;
14. expected Seal conditions;
15. expected launch conditions;
16. operating-cost policy;
17. operating-reserve policy;
18. revenue-attribution rules;
19. bundled-revenue rules;
20. refund rules;
21. failure rules;
22. revival rules;
23. Feature Steward;
24. governance thresholds;
25. successor-feature treatment;
26. retirement and sale rules;
27. conflict-disclosure requirements;
28. legal activation status.

7.3 Charter Immutability

Once Build Fuel has been accepted, the Charter may not be casually rewritten.

A material amendment must:

- be publicly disclosed;
- state the reason;
- show the old and proposed language;
- satisfy the project's amendment threshold;
- allow withdrawal of eligible unspent Build Fuel where practical;
- be permanently recorded.

7.4 No Retroactive Bargains

No project may retroactively:

- reduce promised deed allocation;
- enlarge the Kingdom's ownership;
- alter accepted Finance Points;
- reduce vested Builder Points;
- redirect attributed revenue;
- dilute issued deeds;
- rewrite the definition of project success merely to force a Seal.

ARTICLE VIII — FORGE POWER AND AUTHORIZATION

8.1 Pledge Mechanics

Forge Power may be pledged to one or more proposed projects.

A user may express the pledge as:

- WOLO amount;
- percentage of available Forge Power.

Pledging is reversible until the user ignites Build Fuel or enters another binding project commitment.

8.2 Mandate Threshold

Each project shall publish the amount of pledged Forge Power required for Authorization.

The threshold measures political and economic support.

It does not prove that the project is technically feasible or financially sufficient.

8.3 Authorization Review

Before Authorization, the Kingdom shall verify that the project has:

- a coherent scope;
- a plausible budget;
- identifiable builders or procurement paths;
- measurable milestones;
- a defined revenue model or strategic purpose;
- a complete Charter;
- no obvious conflict with the wider Kingdom.

8.4 No Ownership From Mere Support

Pledged Forge Power earns:

- public recognition;
- Mandate influence;
- possible Patron or Early Supporter status.

It does not earn:

- Finance Points;
- Feature Deeds;
- revenue;
- permanent ownership.

Ownership begins only through actual Build Fuel or accepted work.

ARTICLE IX — BUILD FUEL AND PROJECT ESCROW

9.1 Ignition

Ignition converts specified staked WOLO into project-restricted Build Fuel.

The user must explicitly approve the conversion.

9.2 Project Escrow

Every project shall maintain a separate accounting ledger.

Build Fuel may not be mixed invisibly with:

- ordinary staking reserves;

- betting reserves;
- unrelated project funds;
- personal wallets;
- general treasury funds without a recorded transfer and lawful purpose.

9.3 Milestone Release

Build Fuel shall be released according to published milestones.

A release record shall show:

- amount;
- recipient;
- purpose;
- milestone;
- approval authority;
- transaction reference;
- whether Builder Points vested;
- whether the expense was refundable.

9.4 External Expenses

Some expenses may require currency other than WOLO.

A Charter may authorize conversion of Build Fuel into external currency for:

- hosting;
- contractors;
- software;
- legal costs;
- infrastructure;
- hardware;
- other defined project needs.

Every conversion shall disclose:

- WOLO amount;
- external amount received;
- exchange rate;
- fees;
- recipient;
- purpose;
- receipt or evidence where appropriate.

9.5 Unspent Fuel

Unspent Build Fuel remains in project escrow.

If the project fails, pauses, or completes below budget, unspent Fuel shall be handled according to the Charter.

Possible treatments include:

- pro-rata return;
- contributor vote to retain it as an operating reserve;
- contributor vote to fund an approved expansion;
- transfer to a successor project under the Successor Doctrine.

9.6 Consumed Fuel

Build Fuel is considered consumed when properly released for:

- accepted builder work;
- completed procurement;
- valid infrastructure expense;
- non-refundable authorized project expense.

Consumed Fuel is no longer owned by the financier.

Only consumed Fuel creates permanent Finance Points.

ARTICLE X — FINANCE POINTS

10.1 Purpose

Finance Points divide the 7,000 Patron Deeds among the project's financiers.

They reward both:

- the amount of Build Fuel placed at risk;
- the eligible duration of that risk.

10.2 Core Formula

For each unit of Build Fuel ultimately consumed:

$$\text{Finance Points} = \text{Consumed Build Fuel} \times \text{Eligible Risk Days}$$

The calculation may be performed through daily snapshots.

10.3 Eligible Risk Days

Eligible Risk Days begin when Build Fuel enters escrow.

They stop at the earliest applicable event:

- Forge Seal;
- published maximum Risk Day cap;
- valid refund;
- authorized project pause;
- project failure;
- another Charter-defined cutoff.

10.4 Maximum Risk Period

Every Charter must publish a maximum number of Eligible Risk Days.

This prevents project delays from endlessly increasing financier ownership weight.

A normal maximum may be:

- 180 days;
- 270 days;
- 365 days;

depending on the project.

10.5 Paused Time

Official project pauses may suspend Risk Day accrual.

A pause must be publicly declared and justified.

10.6 Refunded Fuel

Refunded Build Fuel earns no permanent Finance Points.

Where a portion of a contribution is refunded, only the consumed portion retains Finance Points.

10.7 Partial Consumption

If Jim contributes 1,000,000 Build Fuel but only 600,000 is ultimately consumed, only the consumed 600,000 earns permanent Finance Points.

10.8 Patron Deed Formula

$$\text{Patron Deeds}_i = 7,000 \times \frac{\text{Finance Points}_i}{\sum_j \text{Finance Points}_j}$$

The final result shall be converted into whole deeds using a published rounding method.

10.9 Rounding

The default rounding method shall be the largest-remainder method:

1. calculate each participant's exact deed entitlement;
2. assign the whole-number portion;
3. distribute remaining deeds according to the largest fractional remainders;
4. preserve the exact total of 7,000 Patron Deeds.

No Patron Deed may disappear through rounding.

ARTICLE XI — BUILDER POINTS

11.1 Purpose

Builder Points divide the 2,000 Builder Deeds among people who perform accepted work.

11.2 Work Packages

The Charter shall divide construction into defined work packages.

Each package should state:

- deliverable;
- acceptance criteria;
- Build Fuel payment;
- Builder Points available;
- responsible builder;
- reviewer;
- delivery deadline;
- warranty obligations.

11.3 Accepted Work

Builder Points are awarded for delivery, not merely effort.

Self-reported hours alone do not establish entitlement.

11.4 Eligible Contributions

Builder Points may be awarded for:

- architecture;
- programming;
- design;
- art;
- video;
- testing;
- deployment;
- infrastructure;
- replay analysis;
- documentation;
- moderation;
- operations;
- event management;
- commercial development;
- community work;
- other Charter-defined labour.

11.5 Dual Compensation

A builder may receive:

- WOLO payment;
- Builder Points;
- or both.

The deal must be disclosed before work begins.

A fully paid contractor may receive fewer Builder Points than a builder accepting reduced payment and greater project risk.

11.6 Builder Vesting

The constitutional default is:

- 50% of Builder Points vest at accepted milestone delivery;
- 25% vest at production launch;
- 25% vest after a defined warranty period.

The Charter may specify another schedule when justified, but it must be disclosed before the work begins.

11.7 Rejected or Defective Work

Rejected work earns no Builder Points.

Unvested Builder Points may be withheld or clawed back for:

- fraud;
- plagiarism;
- hidden malicious code;
- material non-performance;
- failure to satisfy warranty duties;
- knowingly false completion claims.

Properly vested points shall not be arbitrarily confiscated.

11.8 Builder Deed Formula

$$\text{Builder Deeds}_i = 2,000 \times \frac{\text{Vested Builder Points}_i}{\sum_j \text{Vested Builder Points}_j}$$

Whole deeds shall be assigned using the same published rounding method used for Patron Deeds.

11.9 Builders May Also Be Financiers

A person may receive:

- Patron Deeds for Build Fuel;
- Builder Deeds for accepted work;
- both classes simultaneously.

After issuance, all ordinary Feature Deeds have equal economic value per deed unless a legally necessary structure requires otherwise.

Their origin remains permanently recorded.

ARTICLE XII — THE FORGE SEAL

12.1 Purpose

The Forge Seal is the moment when founding ownership becomes final.

12.2 Seal Conditions

A project may be sealed only when:

- the minimum viable feature has been delivered;
- required accounts are reconciled;
- consumed and unspent Build Fuel are known;
- Finance Points are calculated;
- Builder Points are calculated;
- unresolved material disputes are addressed;
- the Deed cap table can be reproduced independently;
- the Successor Doctrine is attached;
- the feature's legal activation status is disclosed.

12.3 Seal Audit

Before sealing, the project shall publish a Seal Report containing:

- total pledged Forge Power;
- total Build Fuel committed;
- total Build Fuel consumed;
- total Build Fuel returned;
- all major expenditures;
- all Finance Points;
- all Builder Points;
- proposed deed allocation;
- rounding adjustments;
- Kingdom allocation;
- known defects or incomplete items;
- launch readiness.

12.4 Separation of Dates

The following dates are distinct:

Authorization Date

The project may accept Build Fuel.

Forge Seal Date

Ownership is finalized.

Launch Date

The feature enters production.

Revenue Activation Date

The feature begins receiving attributable revenue.

A feature may launch before it generates revenue.

Revenue delay does not reopen founding ownership.

ARTICLE XIII — FEATURE DEED ISSUANCE

13.1 Fixed Supply

Every successfully sealed feature creates exactly:

10,000 Feature Deeds

No more and no fewer.

13.2 Mandatory Distribution

The fixed constitutional distribution is:

Deed Group	Deeds	Ownership
Patron Deeds	7,000	70%
Builder Deeds	2,000	20%
Kingdom Deeds	1,000	10%
Total	10,000	100%

13.3 Patron Deeds

Patron Deeds reward consumed Build Fuel and eligible capital risk.

13.4 Builder Deeds

Builder Deeds reward accepted construction and contribution.

13.5 Kingdom Deeds

Kingdom Deeds belong to the designated Kingdom Treasury or legally established Kingdom entity.

They compensate the Kingdom for providing:

- AoE2WAR;
- WoloChain integration;
- brand and users;
- shared software;
- shared infrastructure;
- discovery and distribution;
- security;
- accounting;
- governance systems;
- ongoing ecosystem support.

13.6 Equal Revenue Rights

Unless a required legal structure provides otherwise, each deed receives the same proportional share of distributable revenue.

One deed equals one ten-thousandth of the distributable feature economy.

13.7 Provenance

Every deed shall permanently record:

- feature;
- original deed class;
- original recipient;
- Seal date;
- transfer history;
- distributions received;
- governance history where applicable.

ARTICLE XIV — FEATURE REVENUE

14.1 Gross Feature Revenue

Gross Feature Revenue includes revenue directly attributable to the feature.

Examples may include:

- usage fees;
- subscriptions;
- advertising;
- sponsorship;

- premium access;
- transaction fees;
- marketplace fees;
- replay purchases;
- commentary purchases;
- feature-specific services.

14.2 Distributable Revenue

Feature Deeds receive distributable revenue, not gross revenue.

Distributable Feature Revenue = Gross Feature Revenue – Refunds and Chargebacks – Direct Infrastructure Costs

14.3 Revenue Per Deed

$$\text{Revenue Per Deed} = \frac{\text{Distributable Feature Revenue}}{10,000}$$

14.4 Distribution Per Holder

$$\text{Holder Distribution} = \text{Revenue Per Deed} \times \text{Deeds Held}$$

14.5 Carry Ledger

Amounts too small to distribute at the base `uwol0` precision shall remain credited in a carry ledger.

No value may disappear through rounding.

14.6 Negative or Zero Months

If expenses equal or exceed revenue:

- no distribution is owed for that period;
- deed holders are not personally liable for the shortfall unless a separate agreement expressly states otherwise;
- the deficit and its cause shall be disclosed;
- reserve use shall be recorded.

14.7 Operating Reserve

Each feature may maintain a published operating reserve.

The Charter must define:

- target reserve size;
- permitted uses;

- maximum automatic contribution;
- approval needed for extraordinary use;
- treatment of excess reserves.

14.8 No Hidden Platform Fee

The Kingdom shall not impose an undisclosed additional revenue percentage after the Deed split.

The Kingdom already participates through its 1,000 Kingdom Deeds.

Any additional direct service charge must be:

- economically justified;
 - separately disclosed;
 - approved under the Charter;
 - treated as a real operating expense.
-

ARTICLE XV — REVENUE ATTRIBUTION

15.1 Direct Revenue

Revenue charged solely for a feature belongs to that feature, subject to direct costs.

15.2 Bundled Revenue

When several features are sold together, the Charter must define how revenue is allocated among them.

Possible methods include:

- usage weighting;
- equal allocation;
- user-selected attribution;
- published internal pricing;
- a hybrid formula.

15.3 No Retroactive Starvation

The Kingdom may not retroactively rewrite revenue attribution merely to deprive a successful feature of income.

15.4 Shared Infrastructure

Where several features use shared infrastructure, costs may be allocated using a disclosed method such as:

- direct usage;
- bandwidth;
- storage;
- compute;
- active users;
- equal base charge plus usage charge.

15.5 Related-Party Transactions

Payments to founders, stewards, builders, treasury entities, or related parties must be clearly disclosed.

ARTICLE XVI — FEATURE DEED RIGHTS

16.1 Economic Rights

Each deed receives its proportional share of distributable feature revenue.

16.2 Governance Rights

Deeds may vote on major feature-specific matters defined by the Charter.

16.3 Transfer Rights

Deeds may eventually be:

- sold;
- gifted;
- transferred;
- inherited;
- placed into a clan treasury;
- transferred through an approved succession mechanism.

Transferability shall activate only after required legal, technical, and compliance conditions are satisfied.

16.4 Provenance Rights

Owners may display:

- founding status;

- original contribution;
- ownership percentage;
- feature distributions;
- historical transfers;
- Architect titles.

16.5 Exit Rights

If the feature or its defined economic rights are sold, deed holders receive their proportional share of net proceeds after:

- transaction expenses;
- liabilities;
- taxes;
- approved closing costs.

16.6 What Deeds Do Not Grant

Feature Deeds do not automatically permit holders to:

- remove project servers;
- seize shared infrastructure;
- personally license AoE2WAR trademarks;
- demand unlawful conduct;
- deploy malicious code;
- violate user privacy;
- unilaterally shut down the feature;
- interfere with ordinary operations;
- claim unrelated AoE2WAR revenue.

ARTICLE XVII — FEATURE GOVERNANCE

17.1 Feature Steward

Every revenue-bearing feature shall have a designated Feature Steward.

The Steward is responsible for:

- ordinary operations;
- maintenance;
- security response;
- roadmap execution;
- reporting;
- proposing major changes.

17.2 Ordinary Operations

Ordinary daily decisions do not require deed-holder votes.

Economic ownership shall not paralyze product operation.

17.3 Major Decisions

Deed-holder approval may be required for:

- sale;
- permanent retirement;
- merger;
- material Charter amendment;
- major revenue-model change;
- extraordinary reserve spending;
- transfer into a successor feature;
- abandonment of a material promised function.

17.4 Default Voting Thresholds

Unless the Charter specifies stricter rules:

Ordinary Major Resolution

- more than 50% of votes cast;
- at least 20% of all deeds participating.

Material Charter Amendment

- at least two-thirds of votes cast;
- at least 40% of all deeds participating.

Sale, Permanent Retirement, or Fundamental Merger

- at least 75% of votes cast;
- at least 50% of all deeds participating.

17.5 One Deed, One Vote

The constitutional default is:

One deed equals one feature-governance vote.

17.6 Kingdom Participation

Kingdom Deeds participate in governance like other deeds unless the Charter defines a conflict rule.

17.7 Emergency Authority

The Kingdom may temporarily suspend or override feature operation only where reasonably necessary for:

- security;
- legality;
- chain integrity;
- prevention of material harm;
- protection of users.

Every emergency action must be:

- narrowly tailored;
- publicly logged;
- explained;
- reviewed afterward.

Emergency authority shall not be used to manipulate ordinary economic outcomes.

ARTICLE XVIII — THE SUCCESSOR DOCTRINE

18.1 Purpose

Feature ownership would be meaningless if the Kingdom could escape deed obligations by replacing a successful feature with a renamed version.

18.2 Successor Feature

A new system shall be presumed to be a successor when it substantially:

- replaces the original feature;
- uses the original user base;
- inherits the original functionality;
- migrates the original revenue;
- uses the original branding or market position;
- is marketed as the next version;
- renders the original economically obsolete.

18.3 Inherited Obligations

A successor feature inherits the original feature's economic obligations unless:

- deed holders approve another arrangement;
- the successor is demonstrably distinct;
- the Charter provided a different treatment in advance.

18.4 Anti-Evasion Rule

The Kingdom may not intentionally route users, fees, or contracts away from a deed-bearing feature solely to avoid distributions.

18.5 Successor Settlement

A successor may:

- inherit the original deeds;
- exchange old deeds for new deeds;
- merge cap tables;
- compensate holders through an approved buyout;
- adopt another approved structure.

The treatment must be transparent and approved under the applicable voting threshold.

ARTICLE XIX — NO DILUTION

19.1 Permanent Supply

A sealed feature's supply remains fixed at 10,000 deeds.

19.2 No Maintenance Dilution

Routine maintenance, bug fixes, hosting, and ordinary upgrades do not justify new deeds.

19.3 Funding Improvements

Post-launch improvements may be funded through:

- feature operating reserves;
- reinvested distributions;
- Kingdom revenue;
- voluntary non-ownership Build Fuel;

- a new Forge project for a genuinely separate feature.

19.4 Separate Subfeatures

A substantially distinct product may create its own Forge and its own 10,000 deeds.

A cosmetic rename or ordinary version update does not create a separate economic feature.

ARTICLE XX — FAILURE, DORMANCY, AND REVIVAL

20.1 Failure Before Fuel

If a proposed project fails before accepting Build Fuel:

- all pledged Forge Power is released;
- no user loses WOLO;
- no Finance Points exist;
- no Feature Deeds are created.

20.2 Failure After Fuel but Before Spending

If Build Fuel entered escrow but remains unspent:

- it shall be returned pro rata unless the Charter permits another approved treatment;
- refunded Fuel earns no permanent Finance Points.

20.3 Partial Construction Failure

If some Build Fuel was properly consumed:

- accepted builders retain valid payments;
- vested Builder Points remain recorded;
- unused Fuel is returned or handled under the Charter;
- no Feature Deeds are issued unless the minimum Seal conditions were met.

20.4 Dormant Forge

A partially completed project may enter Dormant status.

Its ledger shall preserve:

- Finance Points;
- Builder Points;
- completed work;

- remaining Fuel;
- unresolved obligations.

20.5 Revival

If the same project is revived and uses the original capital or work:

- original contributors retain appropriate credit;
- the revival Charter must explain how prior points carry forward;
- the Kingdom may not erase old contribution history.

20.6 Fallen Forge

A permanently failed project becomes a Fallen Forge.

The history remains visible.

Contributors may receive non-economic historical recognition such as:

Founding Patron of the Fallen Forge

No Feature Deeds or revenue rights arise solely from failure.

20.7 No Forced Seal

A failed or incomplete feature may not be sealed merely to manufacture ownership rights.

ARTICLE XXI — POST-LAUNCH OPERATION

21.1 Maintenance

Ordinary maintenance is paid before distributable revenue is calculated.

21.2 Future Builders

Post-launch maintainers may receive:

- WOLO compensation;
- contractual bonuses;
- approved grants;
- new-project Builder Points where a distinct Forge is created.

They do not receive newly minted deeds in the original feature.

21.3 Reinvestment

Deed holders may vote to reinvest a defined portion of distributable revenue.

The vote must specify:

- amount;
- purpose;
- duration;
- expected benefit;
- reporting requirements.

21.4 Steward Replacement

A Steward may be replaced for:

- resignation;
- incapacity;
- persistent non-performance;
- misconduct;
- security failure;
- governance decision under the Charter.

21.5 Feature Reporting

Revenue-bearing features shall publish periodic reports showing:

- gross revenue;
- expenses;
- reserve balance;
- distributable revenue;
- distributions;
- active users or relevant usage;
- major incidents;
- planned work.

ARTICLE XXII — THE DEED MARKET

22.1 Purpose

The eventual Deed Market may allow users to:

- list deeds;
- bid;

- purchase;
- sell;
- gift;
- transfer;
- inherit;
- aggregate feature ownership.

22.2 Legal Activation Gate

The Deed Market shall not activate merely because the software is complete.

Before trading begins, the Kingdom must establish the required legal and compliance structure for:

- revenue-bearing rights;
- ownership records;
- transfers;
- purchasers;
- disclosures;
- marketplace operation;
- resale restrictions;
- taxation and reporting.

22.3 Market Transparency

When legally enabled, a feature market may display:

- last trade;
- bids and asks;
- implied feature value;
- deeds outstanding;
- deeds listed;
- owner count;
- historical distributions;
- trailing revenue per deed.

22.4 No Guaranteed Liquidity

The Kingdom does not guarantee:

- buyers;
- sellers;
- market depth;
- price appreciation;
- future distributions.

22.5 Succession

Owners may designate approved successors or inheritance instructions where legally and technically supported.

A future Succession Vault may allow a user to pass Feature Deeds to:

- children;
- family;
- clans;
- trusts;
- approved beneficiaries.

ARTICLE XXIII — TRANSPARENCY AND THE FORGE CHRONICLE

23.1 Public Chronicle

The Forge Chronicle shall preserve all material events.

23.2 Required Records

The public record should include:

- project proposals;
- Charter versions;
- Forge Power pledges;
- Build Fuel ignition;
- refunds;
- expenditures;
- milestones;
- builder acceptance;
- Finance Points;
- Builder Points;
- Seal Reports;
- deed issuance;
- deed transfers;
- revenue reports;
- distributions;
- governance votes;
- emergency actions;
- successor events;
- retirement or failure.

23.3 Auditability

A technically capable observer should be able to reproduce:

- Crown reward weight;
- available Forge Power;
- project Fuel balance;
- Finance Point totals;
- Builder Point totals;
- deed allocation;
- distributions.

23.4 No Silent Editing

Material records shall not be silently overwritten.

Corrections must preserve:

- the original record;
- the corrected record;
- the reason;
- the author;
- the timestamp.

ARTICLE XXIV — ANTI-GAMING AND CONFLICT RULES

24.1 Wallet Splitting

The Crown Stake cap applies to aggregated eligible identity stake.

24.2 Late Fuel Gaming

Time-weighted Finance Points prevent a late financier from receiving the same ownership as earlier risk capital.

The maximum Risk Day cap prevents intentional project delay.

24.3 Refunded Capital Gaming

Refunded Build Fuel earns no permanent Finance Points.

24.4 Fake Work Gaming

Builder Points require accepted deliverables.

Hours claimed without accepted output do not establish ownership.

24.5 Self-Dealing

A financier, builder, reviewer, Steward, or Kingdom official with a material conflict must disclose it.

Where practical, conflicted participants shall not be the sole approver of their own:

- payment;
- milestone;
- Builder Points;
- expense;
- contract;
- governance proposal.

24.6 Circular Revenue

The Kingdom shall disclose revenue materially funded by:

- treasury subsidies;
- founder purchases;
- related-party transactions;
- temporary promotional spending.

Artificially recycling WOLO through a feature shall not be presented as independent commercial demand.

24.7 Sybil Participation

The system may aggregate related accounts where necessary to enforce:

- Crown caps;
- project limits;
- governance rules;
- identity-based benefits.

The method must be disclosed and appealable.

24.8 Deed Fragmentation

No person may use multiple accounts or wallets to bypass:

- project ownership limits;

- voting restrictions;
- legal purchaser restrictions;
- conflict-disclosure rules.

Related deed holdings may be aggregated when required.

ARTICLE XXV — TITLES, STATUS, AND LEGACY

The Forge shall create prestige primarily through earned status and permanent history—not through unnecessary additional currencies.

Possible titles include:

Staker

Bonds WOLO to the Kingdom.

Patron

Ignites Build Fuel.

Founding Patron

Provides Build Fuel before the project's first major construction milestone.

Builder

Earns accepted Builder Points.

Architect

Owns Feature Deeds in a successfully launched feature.

Magnate

Owns deeds across multiple revenue-bearing features.

Steward

Operates a feature on behalf of its owners and the Kingdom.

Master of Works

Helps bring multiple projects from Charter to successful Seal.

Founder

Creates or materially establishes a lasting part of the AoE2WAR economy.

Titles may have levels based on objective milestones.

Titles shall not obscure the underlying numbers.

A profile might display:

Jim — Architect IV

Founding Patron of Battle Cam

4,200 Battle Cam Deeds

42.00% ownership

2,000,000 WOLO consumed as Build Fuel

32,760 WOLO lifetime distributions

ARTICLE XXVI — USER EXPERIENCE PRINCIPLES

26.1 Lore Above, Accounting Beneath

The visible interface may use medieval, Kingdom, Forge, and construction language.

Every lore term must open into literal accounting.

Example:

The Forge burns brighter.

Underlying record:

500,000 WOLO entered Battle Cam escrow at 14:32 UTC.

26.2 No Hidden Mathematics

Users must be able to inspect:

- formulas;
- caps;

- point totals;
- ownership projections;
- vesting;
- expenses;
- revenue waterfalls.

26.3 Provisional Ownership

Before Seal, the interface may show estimated ownership.

It must be clearly labelled:

Provisional Ownership

It may change as:

- new Build Fuel enters;
- risk days accumulate;
- Fuel is refunded;
- milestones are completed;
- Builder Points vest.

26.4 Final Ownership

After Seal, the interface shall show:

Sealed Ownership

It may change only through valid deed transfers.

26.5 Amount and Percentage Views

Users may view Forge allocations by:

- WOLO amount;
- percentage.

This is a presentation preference only.

26.6 Deed Presentation

The interface should prominently teach:

100 deeds = 1% ownership

A user holding 4,200 deeds should be shown both forms:

4,200 Battle Cam Deeds
42.00% ownership

26.7 Accessibility

The system shall not rely solely on colour.

Every meter and state should also display labels, numbers, and text.

ARTICLE XXVII — RISK DISCLOSURE

27.1 Project Risk

A Forge project may:

- fail;
- exceed budget;
- launch late;
- produce no revenue;
- become obsolete;
- require retirement;
- suffer security incidents.

27.2 Capital Risk

Build Fuel may be spent and lost without producing Feature Deeds if the project does not satisfy Seal conditions.

27.3 Revenue Risk

Feature Deeds do not guarantee revenue.

A successful feature may still distribute zero WOLO during some or all periods.

27.4 Market Risk

Feature Deeds may have:

- no buyers;
- no sellers;
- no legal transfer path;
- no reliable valuation;
- extreme price volatility.

27.5 Platform Risk

AoE2WAR and WoloChain remain subject to:

- software failure;
- founder dependence;
- validator dependence;
- infrastructure costs;
- legal restrictions;
- user-adoption risk;
- market conditions.

27.6 Legal Status

Revenue-bearing and transferable Feature Deeds may require securities, corporate, cooperative, marketplace, tax, consumer, and other legal analysis.

This Constitution defines the intended product and economic mechanics.

It does not itself constitute legal authorization to offer, distribute, trade, or market Feature Deeds.

ARTICLE XXVIII — LEGAL ACTIVATION STAGES

Phase I — Forge Infrastructure

The Kingdom may build:

- capped staking rewards;
- Forge Power;
- project pledging;
- Charters;
- Build Fuel escrow;
- milestone accounting;
- Finance Points;
- Builder Points;
- provisional ownership;
- Seal Reports;
- the Deed ledger.

Phase II — Non-Transferable Deeds

The Kingdom may issue internal, non-transferable Feature Deeds where legally appropriate.

Revenue distributions may remain disabled until the legal structure is confirmed.

Phase III — Revenue Activation

Feature revenue distributions may begin only after the required legal, tax, accounting, and disclosure structure is established.

Phase IV — Deed Market

Trading, gifting, and broader transfer rights may begin only after marketplace and transfer requirements are satisfied.

The software roadmap shall never be mistaken for legal permission.

ARTICLE XXIX — CONSTITUTIONAL AMENDMENT

29.1 Public Amendment Process

Any amendment must publish:

- exact proposed text;
- reason;
- economic impact;
- affected users;
- effective date;
- voting or approval process.

29.2 No Retroactive Confiscation

No amendment may retroactively:

- confiscate issued deeds;
- reduce vested ownership;
- erase valid distributions;
- destroy permanent provenance;
- convert refunded Fuel into Finance Points;
- award points for rejected work.

29.3 Protected Principles

The following principles may not be altered for an already sealed feature:

- exactly 10,000 deeds;
- no post-Seal dilution;
- the sealed cap table;

- equal revenue per ordinary deed;
- preserved provenance;
- Successor Doctrine protection.

29.4 Prospective Changes

The wider Kingdom may prospectively amend:

- Crown Stake caps;
- future Charter templates;
- future governance defaults;
- future vesting defaults;
- future Risk Day defaults.

Such changes shall not rewrite completed projects.

ARTICLE XXX — COMPLETE WORKED EXAMPLE

30.1 Jim's Stake

Jim stakes:

5,000,000 WOLO

His staking composition becomes:

- Crown Stake: 1,000,000 WOLO;
- Forge Power: 4,000,000 WOLO.

His full public stake remains 5,000,000 WOLO.

Ordinary staking rewards use only the first 1,000,000 WOLO.

30.2 Battle Cam Mandate

Jim pledges:

2,000,000 Forge Power

Emaren pledges:

1,500,000 Forge Power

Zodiac pledges:

500,000 Forge Power

The project reaches its Authorization threshold.

No WOLO has yet been spent.

No ownership exists.

30.3 Battle Cam Charter

The Battle Cam Charter publishes:

- Fuel requirement: 4,000,000 WOLO;
 - maximum Risk Days: 180;
 - Patron Deeds: 7,000;
 - Builder Deeds: 2,000;
 - Kingdom Deeds: 1,000;
 - milestone budgets;
 - revenue attribution;
 - Seal requirements.
-

30.4 Fuel Ignition

Jim ignites:

2,000,000 WOLO

Emaren ignites:

1,500,000 WOLO

Zodiac ignites:

500,000 WOLO

The WOLO leaves their stake and enters Battle Cam escrow.

30.5 Finance Points

Assume:

- Jim's consumed Fuel carries 180 Eligible Risk Days;
- Emaren's consumed Fuel carries 120 days;
- Zodiac's consumed Fuel carries 120 days.

Jim:

$$2,000,000 \times 180 = 360,000,000$$

Emaren:

$$1,500,000 \times 120 = 180,000,000$$

Zodiac:

$$500,000 \times 120 = 60,000,000$$

Total Finance Points:

$$600,000,000$$

Patron ownership:

- Jim: 60% of the Patron pool;
- Emaren: 30%;
- Zodiac: 10%.

Patron Deeds:

$$7,000 \times 60\% = 4,200$$

$$7,000 \times 30\% = 2,100$$

$$7,000 \times 10\% = 700$$

Therefore:

- Jim receives 4,200 Patron Deeds;
 - Emaren receives 2,100 Patron Deeds;
 - Zodiac receives 700 Patron Deeds.
-

30.6 Builder Deeds

Accepted Builder Points are divided among:

- lead engineer;
- frontend builder;
- infrastructure builder;
- designer;
- testers;
- documentation and operations.

Suppose their final deed allocation is:

Builder	Builder Deeds	Feature Ownership
Lead Engineer	900	9%
Frontend Builder	450	4.5%
Infrastructure Builder	300	3%
Design and Testing	250	2.5%
Documentation and Operations	100	1%
Total	2,000	20%

30.7 Kingdom Deeds

The Kingdom receives:

1,000 Battle Cam Deeds

This equals:

10% ownership

30.8 Final Cap Table

Holder	Deeds	Ownership
Jim	4,200	42%
Emaren	2,100	21%
Zodiac	700	7%

Holder	Deeds	Ownership
Builders	2,000	20%
Kingdom	1,000	10%
Total	10,000	100%

30.9 Revenue

Battle Cam earns:

100,000 WOLO gross revenue

Expenses:

- infrastructure: 12,000;
- maintenance: 6,000;
- reserve contribution: 3,000;
- payment and refund costs: 1,000.

Distributable revenue:

$$100,000 - 22,000 = 78,000 \text{ WOLO}$$

Revenue per deed:

$$78,000 \div 10,000 = 7.8 \text{ WOLO}$$

Jim's distribution:

$$4,200 \times 7.8 = 32,760 \text{ WOLO}$$

Emaren's distribution:

$$2,100 \times 7.8 = 16,380 \text{ WOLO}$$

Zodiac's distribution:

$$700 \times 7.8 = 5,460 \text{ WOLO}$$

Builders collectively receive:

$$2,000 \times 7.8 = 15,600 \text{ WOLO}$$

The Kingdom receives:

$$1,000 \times 7.8 = 7,800 \text{ WOLO}$$

Total distributed:

$$32,760 + 16,380 + 5,460 + 15,600 + 7,800 = 78,000 \text{ WOLO}$$

Every unit is accounted for.

ARTICLE XXXI — IMPLEMENTATION ORDER

The Kingdom Forge should be built in the following sequence.

Stage 1 — Staking Reform

- show full stake;
- cap ordinary reward weight at 1,000,000 WOLO;
- calculate Forge Power;
- aggregate linked staking identities;
- preserve complete staking history.

Stage 2 — Forge Mandate System

- create Forge page;
- project tiles;
- Mandate, Fuel, and Construction meters;
- pledge and reallocate Forge Power;
- public activity chronicle;
- Charter viewer.

Stage 3 — Build Fuel

- project-specific escrow;
- explicit Ignition;
- milestone releases;
- refunds;
- expenses;
- external-currency conversion records.

Stage 4 — Points

- daily Finance Point snapshots;
- consumed-Fuel adjustment;
- Risk Day caps;
- Builder work packages;
- Builder Point vesting;
- dispute handling.

Stage 5 — Seal and Deed Ledger

- Seal Reports;
- deterministic deed allocation;
- 10,000-deed issuance;
- permanent cap table;
- provenance;
- user ownership portfolios.

Stage 6 — Feature Accounting

- revenue attribution;
- cost accounting;
- operating reserves;
- carry ledger;
- distribution simulation;
- reports.

Stage 7 — Legal Activation

- entity and contract structure;
- legal review;
- tax treatment;
- disclosure package;
- transfer restrictions;
- distribution activation.

Stage 8 — Deed Market and Succession

- listings;
- bids;
- trades;
- gifting;
- inheritance;
- clan treasuries;
- succession vaults.

ARTICLE XXXII — THE KINGDOM FORGE DATA MODEL

The technical implementation should preserve the distinction between assets, states, points, and ownership records.

32.1 Core Identity Records

Each eligible user should have:

- AoE2WAR user ID;
- linked player identity;
- linked WoloChain addresses;
- total eligible stake;
- Crown Stake;
- Forge Power;
- pledged Forge Power;
- Build Fuel history;
- Feature Deed portfolio.

32.2 Project Records

Each Forge project should have:

- permanent project ID;
- project name;
- description;
- lifecycle state;
- active Charter version;
- Mandate target;
- Fuel target;
- Fuel maximum;
- Construction progress;
- Seal requirements;
- Steward;
- legal activation state.

32.3 Pledge Records

Each pledge should record:

- user;
- project;
- Forge Power amount;
- effective date;
- release date;
- current status.

32.4 Fuel Records

Each Fuel record should contain:

- financier;
- project;
- amount ignited;
- date ignited;
- amount consumed;
- amount refunded;
- Eligible Risk Days;
- resulting Finance Points.

32.5 Builder Records

Each builder contribution should contain:

- builder;
- work package;
- promised deliverable;
- Build Fuel compensation;
- Builder Points offered;
- Builder Points vested;
- reviewer;
- acceptance evidence;
- warranty status.

32.6 Deed Records

Every deed position should record:

- project;
- owner;
- number of deeds;
- originating deed class;
- original grant;
- transfers;
- distributions;
- governance participation.

The implementation may store deed balances rather than creating 10,000 separate database rows, provided that:

- the total always equals exactly 10,000;
- provenance remains reproducible;
- every transfer is permanently recorded.

32.7 Revenue Records

Each revenue period should show:

- gross feature revenue;
 - each cost deduction;
 - reserve contribution;
 - distributable revenue;
 - revenue per deed;
 - each holder's distribution;
 - carry balances;
 - payment status.
-

ARTICLE XXXIII — THE USER'S PATH THROUGH THE KINGDOM

The Kingdom Forge should feel like progression through a living civilization.

Level I — Holder

I possess WOLO.

Level II — Staker

I bond my WOLO to the Kingdom.

Level III — Crown Staker

Up to one million of my staked WOLO earns ordinary Kingdom rewards.

Level IV — Patron

My excess stake becomes Forge Power, and I choose what the Kingdom should build.

Level V — Financier

I ignite Build Fuel and place real capital at risk.

Level VI — Builder

I perform accepted work and earn Builder Points.

Level VII — Architect

A Forge I financed or built successfully seals, and I receive Feature Deeds.

Level VIII — Magnate

I own revenue-bearing deeds across multiple features.

Level IX — Steward

I operate and protect a feature owned by the Kingdom's citizens.

Level X — Legacy Holder

I transfer, gift, or pass my property to another generation.

This progression is not based only on wealth.

It recognizes:

- holding;
- commitment;
- judgment;
- risk;
- labour;
- delivery;
- stewardship;
- legacy.

ARTICLE XXXIV — FINAL DECLARATION

The Kingdom Forge is built on a simple moral economy:

Capital deserves reward when it accepts real risk.

Labour deserves reward when it creates real value.

The Kingdom deserves reward when it sustains the world in which that value can exist.

No one group receives everything.

The financiers do not own the builders.

The builders do not consume the financiers' capital without accountability.

The Kingdom does not impose invisible taxes after the bargain is made.

Every completed feature is divided by constitutional law:

70% to those who fueled it.
20% to those who built it.
10% to the Kingdom that carries it.

Every feature creates exactly:

10,000 Feature Deeds

Every one hundred deeds represent:

1% ownership

Every deed has history.

Every distribution has mathematics.

Every project has a Charter.

Every successor inherits its obligations.

Every failure remains part of the record.

And every citizen can understand the path:

Stake your WOLO.
Choose what should exist.
Fuel what you believe in.
Build what the Kingdom needs.
Own what you helped create.
Earn from what succeeds.
Pass your legacy forward.

THE KINGDOM IS NOT GIVEN.

IT IS BUILT.
